

Strand ELReg

Electoral Registration & Document Imaging

The Strand system is ready for the future - is yours?

The Strand Electoral Registration System is a comprehensive and fully relational database, designed to ease the workload of electoral staff.

The canvass and rolling databases are easy to use allowing you full control to add streets, properties and electors making your monthly updates a breeze.

Powerful search capabilities allow electoral staff to quickly locate individual electors by name, and properties by house name, street name and number, or post code.

Strand ELReg allows for comprehensive reporting in all formats required by all stakeholders and Printers.

Perform advanced boundary changes. Create polling districts, streets and sub-groups. Move properties and electors between polling districts or move electors between addresses within the register database. Strand ELReg allows you full control whilst also providing an interface with Idox's corporate Land & Property Gazetteer.

Key benefits

- > Innovate solution designed with the user in mind
- > Enterprise level system security
- > Easy to maintain register through intuitive user interface
- > Property based system with fully relational databases
- > Simple search functions make findability effortless
- > Capacity for up to 10 elections: Single, combined or overlapped
- > System generated reports for all functions
- > Comprehensive interface with MS Word
- > Experienced, dedicated ERO support team

Product features:

Property based system four layered databases

Separate databases for polling districts, streets and sub-groups, properties and electors, with single mouse-click or keystroke to move between them. Each can be accessed to add, delete or amend records.

Scrolling screens

The 'scrolling screens' allow users to access all levels of a record. Single mouse clicks will take you from polling district to street, from street to property, property to elector, with the ability to view all relevant details at each level.

Register maintenance

Easy-to-follow on screen forms to add streets and sub-groups, properties and electors.

BS7666 / LLPG

As part of the Idox group, we have a dynamic interface that will populate Strand ELReg from the LLPG. Strand ELReg also works with other LLPG systems. The system is fully compatible with CORE and BS7666.

Monthly updates

A simple process exists to create an email of monthly updates to other local authorities with optional creation of zipped and encrypted files. The system contains full and up to date contact details for all local authorities which is updated regularly.

Register display

Elector-level display of all elector markers including AV status and qualification month. Canvass database displays property response status including if information received by phone, web, sms, canvasser or council tax.

Document imaging

The system includes a fully integrated document management and workflow system. This is designed to record images of forms against properties or electors, to automate common tasks and provide full workflow capabilities.

Multiple search facilities

Search by elector name or address using progressive text and by elector number or property and elector barcode.

Full-feature absent voting

Personalised AV forms produced from the system. All system or external applications scanned and in some circumstances auto-processed and attached at elector level. PI cropped data also stored at elector level. Ballot numbering, UIM's and CNL's produced automatically.

"Idox's Strand electoral software helps us to get things right, first time. We've been using the software for more than ten years, and through continuous innovation it just keeps getting better."

Phil Hardy, Electoral Services Manager,
South Staffordshire District Council

Multiple elections

Ten individual election slots available simultaneously, for Combined or overlapping elections.

Documents & word processing

The system includes many hundreds of documents and forms ready for use by the Local Authority. Create personalized application, confirmation and reminder forms and letters for all types of declaration electors and absent votes through interface to MS Word.

Strand PubReg

Integrated module designed for contact centres reducing the pressure on electoral staff during busy periods. Allows a property search only of the register database, with the ability to produce personalised canvass, registration or AV forms. Information on polling buildings, elected members, MP's and MEP's is easily obtained. Options to display details of opt outs, ballot returns during elections and canvass returns during canvass.

Sale of registers

Comprehensive module covering all aspects of register sales, including history file.

Archiving

Complete archiving for all registers for as many years as required allows simple look-up for any previous record including canvass form images.

Security & access

Six levels of access all with individual user names and passwords. System level audit facility to record and trace all data entries and amendments. 256bit Encryption for zip files.

Interface to other Strand products

Simple interface to other Strand systems for candidate and subscriber checks, PI checking and results display.
