

# Strand SelCheck

## Absent Vote PI Checking

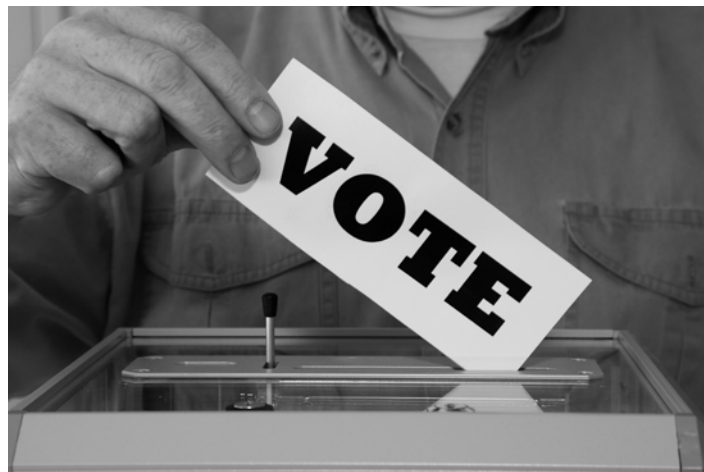

### Proven verification & anti-fraud system

Strand's innovative postal vote identifier solution has been developed to provide Returning Officers with the opportunity to compare 100% of signatures and dates of birth on returned Postal Vote Statements with stored masters extremely quickly and efficiently.

**Nothing Left To Chance** - While the system is fully automated in checking all signatures and dates of birth, no risk is taken with any absent vote. This is the most proven and refined system on the market today. The system is accurate, speedy and automated to make the task of AV PI checking manageable and foolproof.

Strand SelCheck's advanced fraud area allows Returning Officers to conduct checks on failed signatures against other postal voters for elector, property, street, postcode and district. A comparison can be made on all signatures at a property.

The simple to use Strand SelCheck package is designed to operate on either a stand alone basis or, if required, on a network. Strand also have experience of taking and giving data to non Strand systems to populate the system for seamless operation.

### Key benefits

- > Meets legislative requirements for Absent Voters
- > Meets all requirements of the EA Act 2006
- > Fully automated checking
- > Simple and easy to use interface
- > Secure postal voting mechanism gives peace of mind at every election
- > Full on-board scanning module

## Product features:

### Multiple Elections

Ten individual election slots available simultaneously, for Combined or overlapping elections.

### Signature And Date Of Birth Capture

Fully functional on board scanning features enable simple capture of PI's from security statements. Cropping zones can be preset easily.

### Date Of Birth Extraction

Dates of birth are extracted and stored from the image and compared as part of the automated verification process.

### Automated Verification

Signatures are compared and verified automatically using technology developed from banking systems.

### Review Failures

Simple visual interface to check any rejected signatures, including Returning Officers review area. Full and cropped images available.

### Fraud Controls

Features that allow you to look beyond basic checks and make comparisons of all voters signatures from single properties, complete streets and polling district.

### Reporting

A comprehensive array of reports, graphs and statistics to meet the demands of any reporting process required.

### Word Processing

The system is interfaced to Microsoft Word for form design and production of letter runs.

### Data Import

Strand SelCheck is independent of any Electoral Registration System and can receive data from a variety of sources to facilitate easy initial set up.

### Core Compliant

The system is fully compatible with CORE and BS7666.

### Data Security & System Administration

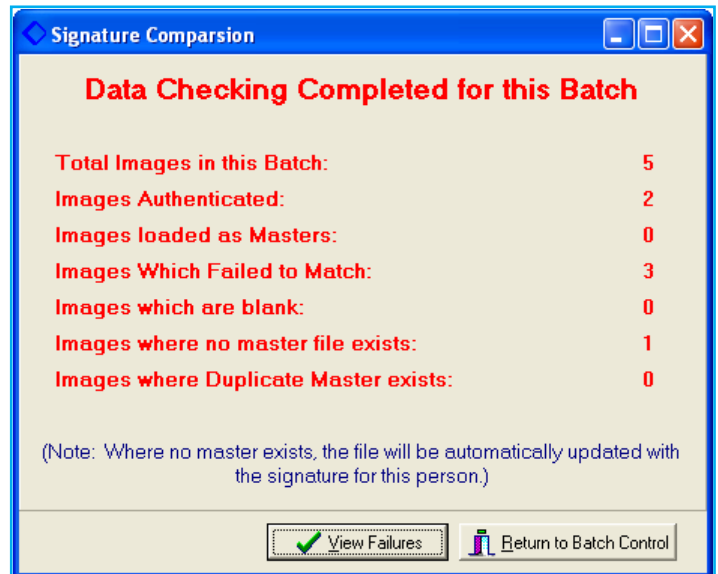

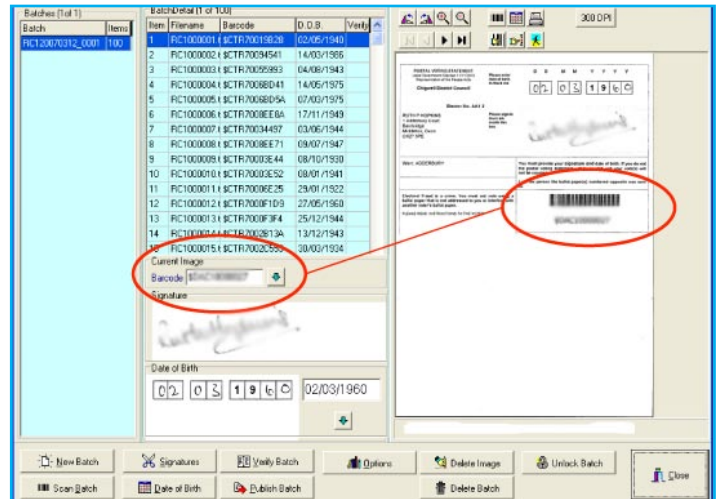

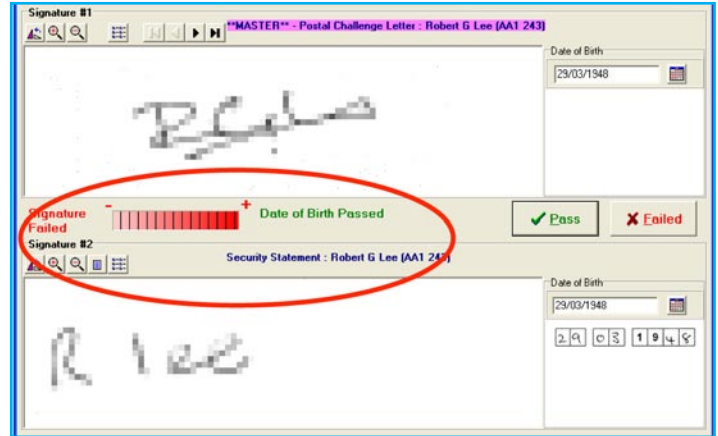

Different levels of access built into the system for administrators, scanning and verifying personnel and Returning Officer functions.

### Approved For Grant Purposes

Up to 50% off software cost.

"We were guided through all processes from start to finish with excellent support throughout – we certainly chose the right provider for our new systems. The solution to the problems we had with the printer during the election was invaluable."

Michel Saminaden, Chief Executive, Welwyn Hatfield Borough Council
