

Strand SEMS

Election Management System

Complete election management control

The Strand Election Management System is a reliable and affordable end-to-end software solution to manage your election.

Strand SEMS puts you in full control at all times and includes powerful automated functions to save you time, with peace of mind, knowing the Strand system meets all current legislation.

Designed for users from the bottom up, the product makes it simple and easy to set up single or multiple elections from scratch and manage them all the way through the process, until candidates are elected.

Strand SEMS can be used for all election types from Parish to European including Scottish, Welsh and London regional governments. The flexible solution allows for combined or overlapped elections to run concurrently.

The Strand SEMS database manages estates and assets required for each election, from buildings and their usage down to the finest details, including payment information and equipment provided.

Powerful MS Word interface and Reporting functions allow customised control for all your needs.

Key benefits

- > Capacity for up to 10 elections: Single, combined or overlapped
- > Easy to use Windows interface
- > Designed for Electoral Administrators
- > Full template database handles all stakeholders, facilities and election resources
- > Automated tasks save users time and ensures accuracy is maintained

 By Election

Create Cancel Help

"We get a professional, first class service with excellent, friendly support - we feel like a much valued customer. All the modules are easy to use and highly efficient."

Nicky Timms, Elections Team Manager, Tunbridge Wells Borough Council

Automated staff payments

Ability to produce general ledger file of staff election payments for payroll run, or laser-cheques, plus P528 receipts. Optional bank details output.

Uncontested elections

All aspects of uncontested elections controlled from a single program - it can even change the polling jobs automatically.

Staff training events

Set up and manage training events. Select venues, keep track of number of events and staff attending. Automatic fee assignment for attendance.

Timetables

Creates sample timetables for all types of election against given criteria and automatically produces election timetables for statutory and user-defined events. Plus an administrators' election diary can be produced to assist with project management.

Management details

User has total control over all system outputs programs at all stages.

Toolbar menu

Windows 'Explorer' type interface gives clear geographical make-up by constituency, ward, parish etc. Most frequently used functions (employment, buildings, nominations etc.) have single-click button access.

Data security & System administration

Five levels of access built into the system plus user pass-wording, archiving and menu editing.

Interface to Strand ELReg

Automatic interface to carry out candidate and subscriber checks in Strand ELReg and import elections statistics including ballot book allocation.

Results display

Automated inputting allowing 'on-the-night' service, including displays via the optional Strand SERVO system.

Approved for grant purposes

Up to 50% off software cost.
